

GOWTHAM KUMAR KATIRALA

Software Engineer

PROFILE SUMMARY

Results-driven .NET Developer with hands-on experience in building scalable backend applications using C#, .NET Core, and ASP.NET Web API.

- Skilled in developing secure and efficient backend systems using RESTful APIs, Entity Framework Core, and database integration.
- Experienced in implementing JWT authentication, role-based access control, and working with real-world application workflows including debugging and deployment.
- Proficient in designing modular systems using Clean Architecture, ensuring maintainability, performance, and code quality.
- Focused on building efficient, reliable, and production-ready software solutions using modern .NET technologies.

TECHNICAL SKILLS

Programming Languages	C# SQL
Frameworks/Libraries	ASP.NET .NET Core Entity Framework Core LINQ
Database Technologies	MySQL
UI Development	HTML CSS
Tools / Technologies	Git GitHub Visual Studio Postman
Development Practices	Clean Architecture SOLID Principles Input Validation Debugging & Error Handling Basic Performance Optimization

EXPERIENCE

Software Engineer – Zapcom Group Inc (2026)

Worked on backend application development using C#, .NET Core, and ASP.NET Web API, gaining practical exposure to real-world software workflows and system design.

Collaborated with the team to debug issues, understand system architecture, and support deployment processes in a production environment.

Developed secure and scalable RESTful APIs with JWT authentication and role-based access control.

Implemented efficient data handling using Entity Framework Core, along with validations and error handling to improve application reliability.

PROJECTS

Mini E-Commerce API (2026)

Developed a scalable backend for an e-commerce platform using ASP.NET Core following Clean Architecture principles.

Designed and implemented RESTful APIs supporting product management with full CRUD operations.

Integrated JWT-based authentication and role-based access control for secure endpoints.

Implemented Azure Blob Storage for efficient image upload and management, including optimized image replacement.

Ensured data validation, error handling, and structured architecture for maintainability and performance.

Tech Stack: C#, ASP.NET Core, Web API, Entity Framework Core, SQL Server, Azure Blob Storage, JWT

ZapChat – Real-Time Chat Application (In Progress)

Building a real-time chat application using ASP.NET Core with user authentication, chat rooms, and private messaging features. Implementing WebSocket-based communication using SignalR in ASP.NET Core for instant message delivery.

Designing a scalable backend with .NET Core and a responsive frontend, including persistent chat history storage. Focusing on secure authentication, real-time updates, and efficient state management within the ASP.NET Core architecture.

EDUCATION

B.E – Artificial Intelligence and Data Science

Chaitanya Bharati Institute of Technology (2022 – 2026)

CGPA: 9.2
